

ICoNiChem Widnes Ltd

ICoNiChem Widnes Ltd, a subsidiary of ICoNiChem Group Ltd, was acquired by the ultimate beneficial owners of Cengiz Holdings AS. ICoNiChem Widnes Ltd has retained all of its in house knowledge and continues to ensure the highest standards of operation to ensure safety and quality at all times.

ICoNiChem Widnes Ltd manufactures specialty Cobalt metal salts used in the manufacture of colour pigments, rubber adhesion promoters, paint driers and petrochemical catalysts. Our goal is to supply the marketplace with high quality metal compounds as standard or customized products. Our long standing success is built upon technical expertise, supplier reliability, and customer relationships.

The company employs 56 staff in the UK and global exports represent 95% of sales.

We continue to maintain our quality, environmental and feedstuffs certifications.

We are proud of our safety record which is driven by a goal of zero incidents. We routinely review these aspects of our business with our customers.

Safety information for our Neighbours

ICoNiChem Widnes Ltd

The activities on site at ICoNiChem Widnes Ltd. have not changed. Some of the chemicals that we work with are included under the Control of Major Accident Hazards (COMAH) regulations. Under the regulations we:

- prepare a SAFETY REPORT covering our operations, the major hazards that could arise and how these are minimised and controlled. This Report has been assessed by the Health and Safety Executive and the Environment Agency.
- prepare EMERGENCY PLANS in collaboration with Halton Borough Council and the local emergency services. The emergency plans include details of the immediate off-site response to a major incident on our site.
- provide essential SAFETY INFORMATION for our neighbours, including local residents and businesses.

This leaflet and the accompanying Emergency Advice Card contain essential safety information and tell you what to do in the unlikely event of a major incident at ICoNiChem Widnes Ltd.

What should you do in an emergency?

A useful phrase to remember with any chemical incident is

Go In

Stay In

Tune In

EMERGENCY INSTRUCTIONS FOR YOUR SAFETY

Warning of danger – In the event of a major accident ICoNiChem will operate a siren that can be heard off site. The siren has a wailing sounder. A four minute warning on this siren will be sounded periodically until the all clear. Details of siren testing are on the Emergency Advice Card

Go to a safe place – Go indoors. Local schools, nurseries, homes for the elderly and vulnerable and other community facilities will be prepared for this situation. Do not leave your home or work to collect children or go outside.

Make the place safer – close all doors and windows as well as any other ventilation. Switch off gas appliances, do not light matches or start engines. Move away from windows that face the ICoNiChem Widnes Ltd site.

Tune into local radio – The details for local radio stations are given on the Emergency Advice Card.

Further information – do not call ICoNiChem, the emergency services or TV and radio stations, as these lines need to be kept free for emergency use.

All clear – the siren will sound every four minutes until the situation has been resolved.

Our plans and partners – ICoNiChem has plans in place for both on-site and off-site incidents. We work closely with the emergency services and other agencies to ensure that risks are minimised and controls are in place to deal with any incidents effectively and efficiently, with minimum impact on our neighbours and the environment. In the event of an incident, please cooperate with the emergency services and follow their instructions and advice.

What hazardous material do we handle?

The business of ICoNiChem Widnes Ltd is the production of cobalt salts. Cobalt salts are classified as hazardous to the environment. Cobalt is an essential trace mineral for all animals and is used in animal feeds, it is also used in dyes, batteries, catalysts and alloys.

How could these materials affect people and the environment?

As part of our emergency plans, we have to identify all the potential scenarios that could create a major incident. The representative scenarios identified in our full plans include:

- Failure of a chemical storage tank
- A fire involving products in warehouses or plant
- Incorrect handling of materials.

The largest potential risk on site is a large spill of chemicals which could damage the municipal water treatment works.

What do we do to prevent incidents?

We are proud of our safety record which is driven by a goal of zero incidents. We invest a huge amount of time, effort and money managing our site safety to prevent incidents of the kind described above. The Health and Safety Executive, Environment Agency and our insurers assess all our procedures regularly and we are also audited by the British Standard Institute. Our processes and equipment incorporates the latest relevant technology, ICoNiChem Widnes Ltd employees are trained and experienced in the work they undertake, and our approved suppliers, contractors and hauliers meet the highest standards of training and safety awareness.
